ISDD Industry Standard Datasheet Definition
Build and Use Program
(Why Do It
(How to Do It)

Datasheet/Spreadsheet Engineering Use Issues

Pump Datasheet Elements Plant Maintenance, Operations

Operations		Maintenance	
Category	Number of Elements	Category	Number of Elements
Data Sheet Header	10	Pump Materials	4
Drive and Power Train	6	Pump Bearings	10
Liquid Characteristics	6	Base Plate Information	14
Service Conditions	6	Seal Plans	2
Notes on Pump Design	6	Heating and Cooling	8
Pump Performance	14	Manifold Piping	4
Pump Physical Orientation	22	Painting Spec's	8
Pump Casing	2	Maintenance Prep.	4
Case Pressure Limits	6	Safety Limits	25
Rotor Information	3	Manufacturing Tests	10
Coupling Information	8	Welding PMI Inspections	25
Notes on Rotating Elements	6	As Built Field Tests	31

Datasheet Elements needed 240 per Pump API 610

- Green field project installations still heavily rely on standardized datasheets developed by API, ASME, ANSI, PIDEX, PIP, ISA, IEC, etc. for design and procurement
- Almost all Brown field plants keep important data resident in datasheets/spreadsheet

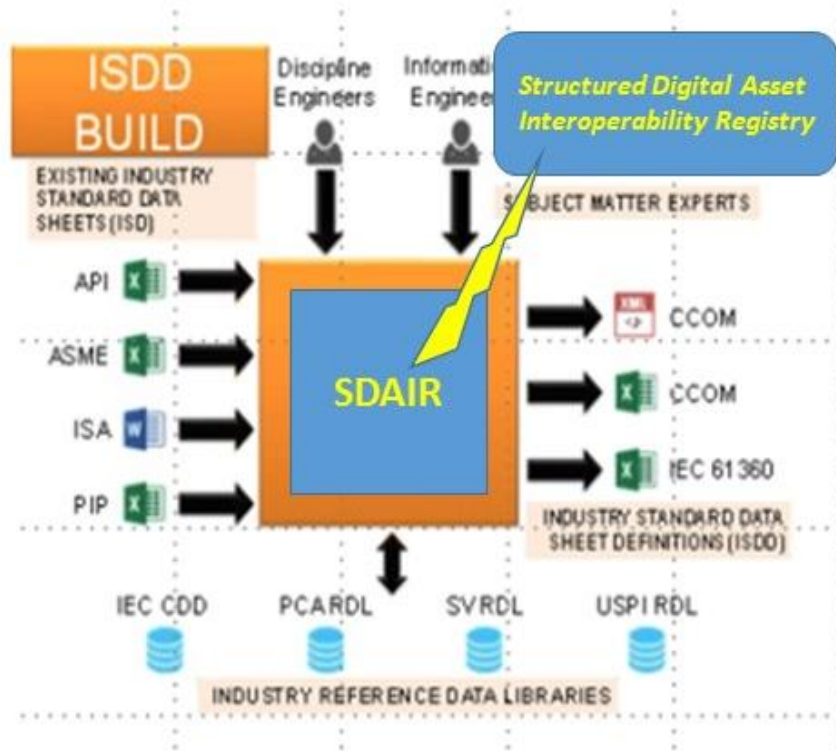

- Datasheets are *visual documents* with a significant amount of data represented by graphic symbols
- Managing the *number of datasheets* Types, Instances, and the *number of data elements* required per instance become a daunting challenge
- Engineering handover is complicated by datasheets as a storage/system of record especially if there are multiple revisions steps.
- Systems of Record and plant applications requiring initialization becomes very difficult if data is trapped in datasheets/spreadsheets & documents

Industry Standard Data Sheets (ISDs)

- Currently we have identified 263 source ISDs in common use
- Most commonly identified ISD publishers are listed below

API	15 (+20 ISO equivalents)
ASME	2 (+1 ISO equivalent)
IEC	10
ISA	166
ISO	28
NORSOK	31
PIP	11

ISDD Build Values and Benefits

ISDD Build Benefits

- A step-wise conversion process producing single final format for all data sheet types that is the input for the OIIE SDAIR – Standardized Digital Asset Interoperability Register
- A means to define Graphical Symbol logic values utilized in data sheets (Radio Buttons, Rectangles, Check Boxes etc).
- A reliable method for managing Units of Measure – UOM for both SI and US Customary Units leveraging the Energetics UOM source information.

ISA 20T2221 RTD/Thermocouple Temperature Transmitter or Switch Revision 1 Data-sheet

Fig. 4.4.1
A typical orifice plate steam flowmetering station

20F2041 - ORIFICE PLATE ASSEMBLY w/wo METER TUBE--
 Device Specifications

20F1001 - FLOW DEVICE – Operating Parameters

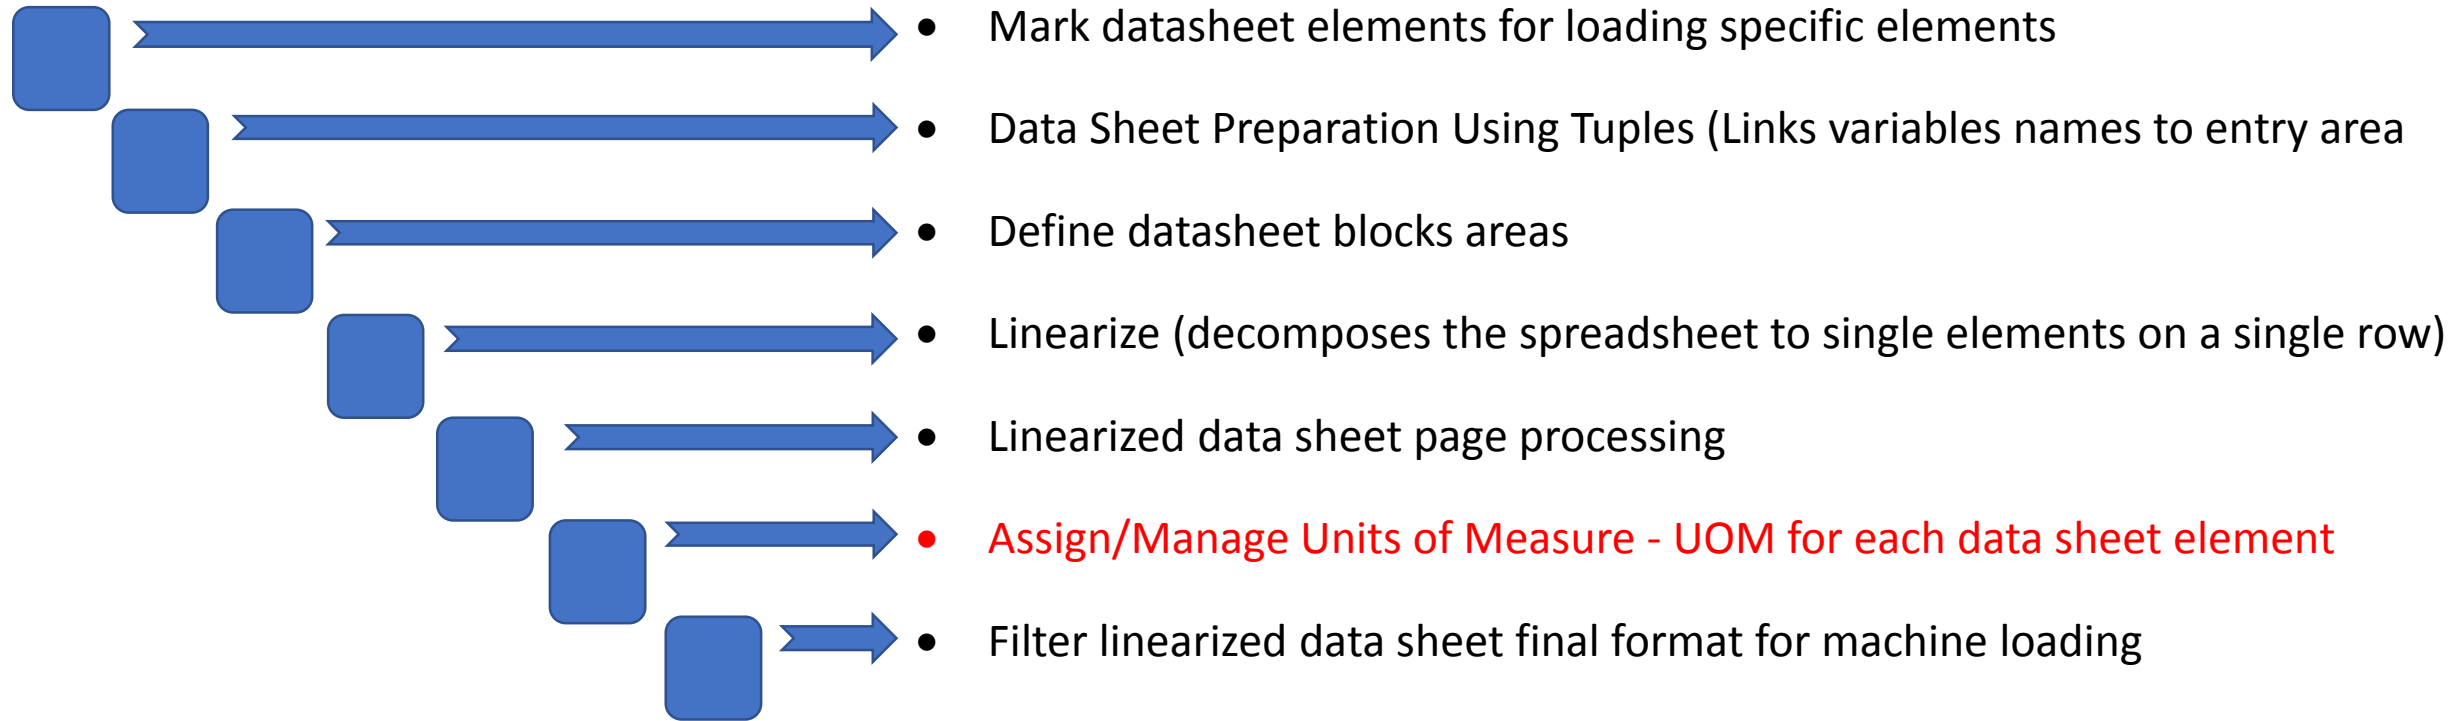

20P1001 - DIFFERENTIAL PRESSURE TRANSMITTER – Operating
 Parameters

20P2311 – DIFFERENTIAL PRESSURE TRANSMITTER - Device
 Specifications

These data sheets comprise all the data to
 define the functional location of a flow meter
 installation on a P&ID

Data Sheet To ISDD Load File Processing Steps Until 2017 Was Manual Steps Below

ISDD Phases

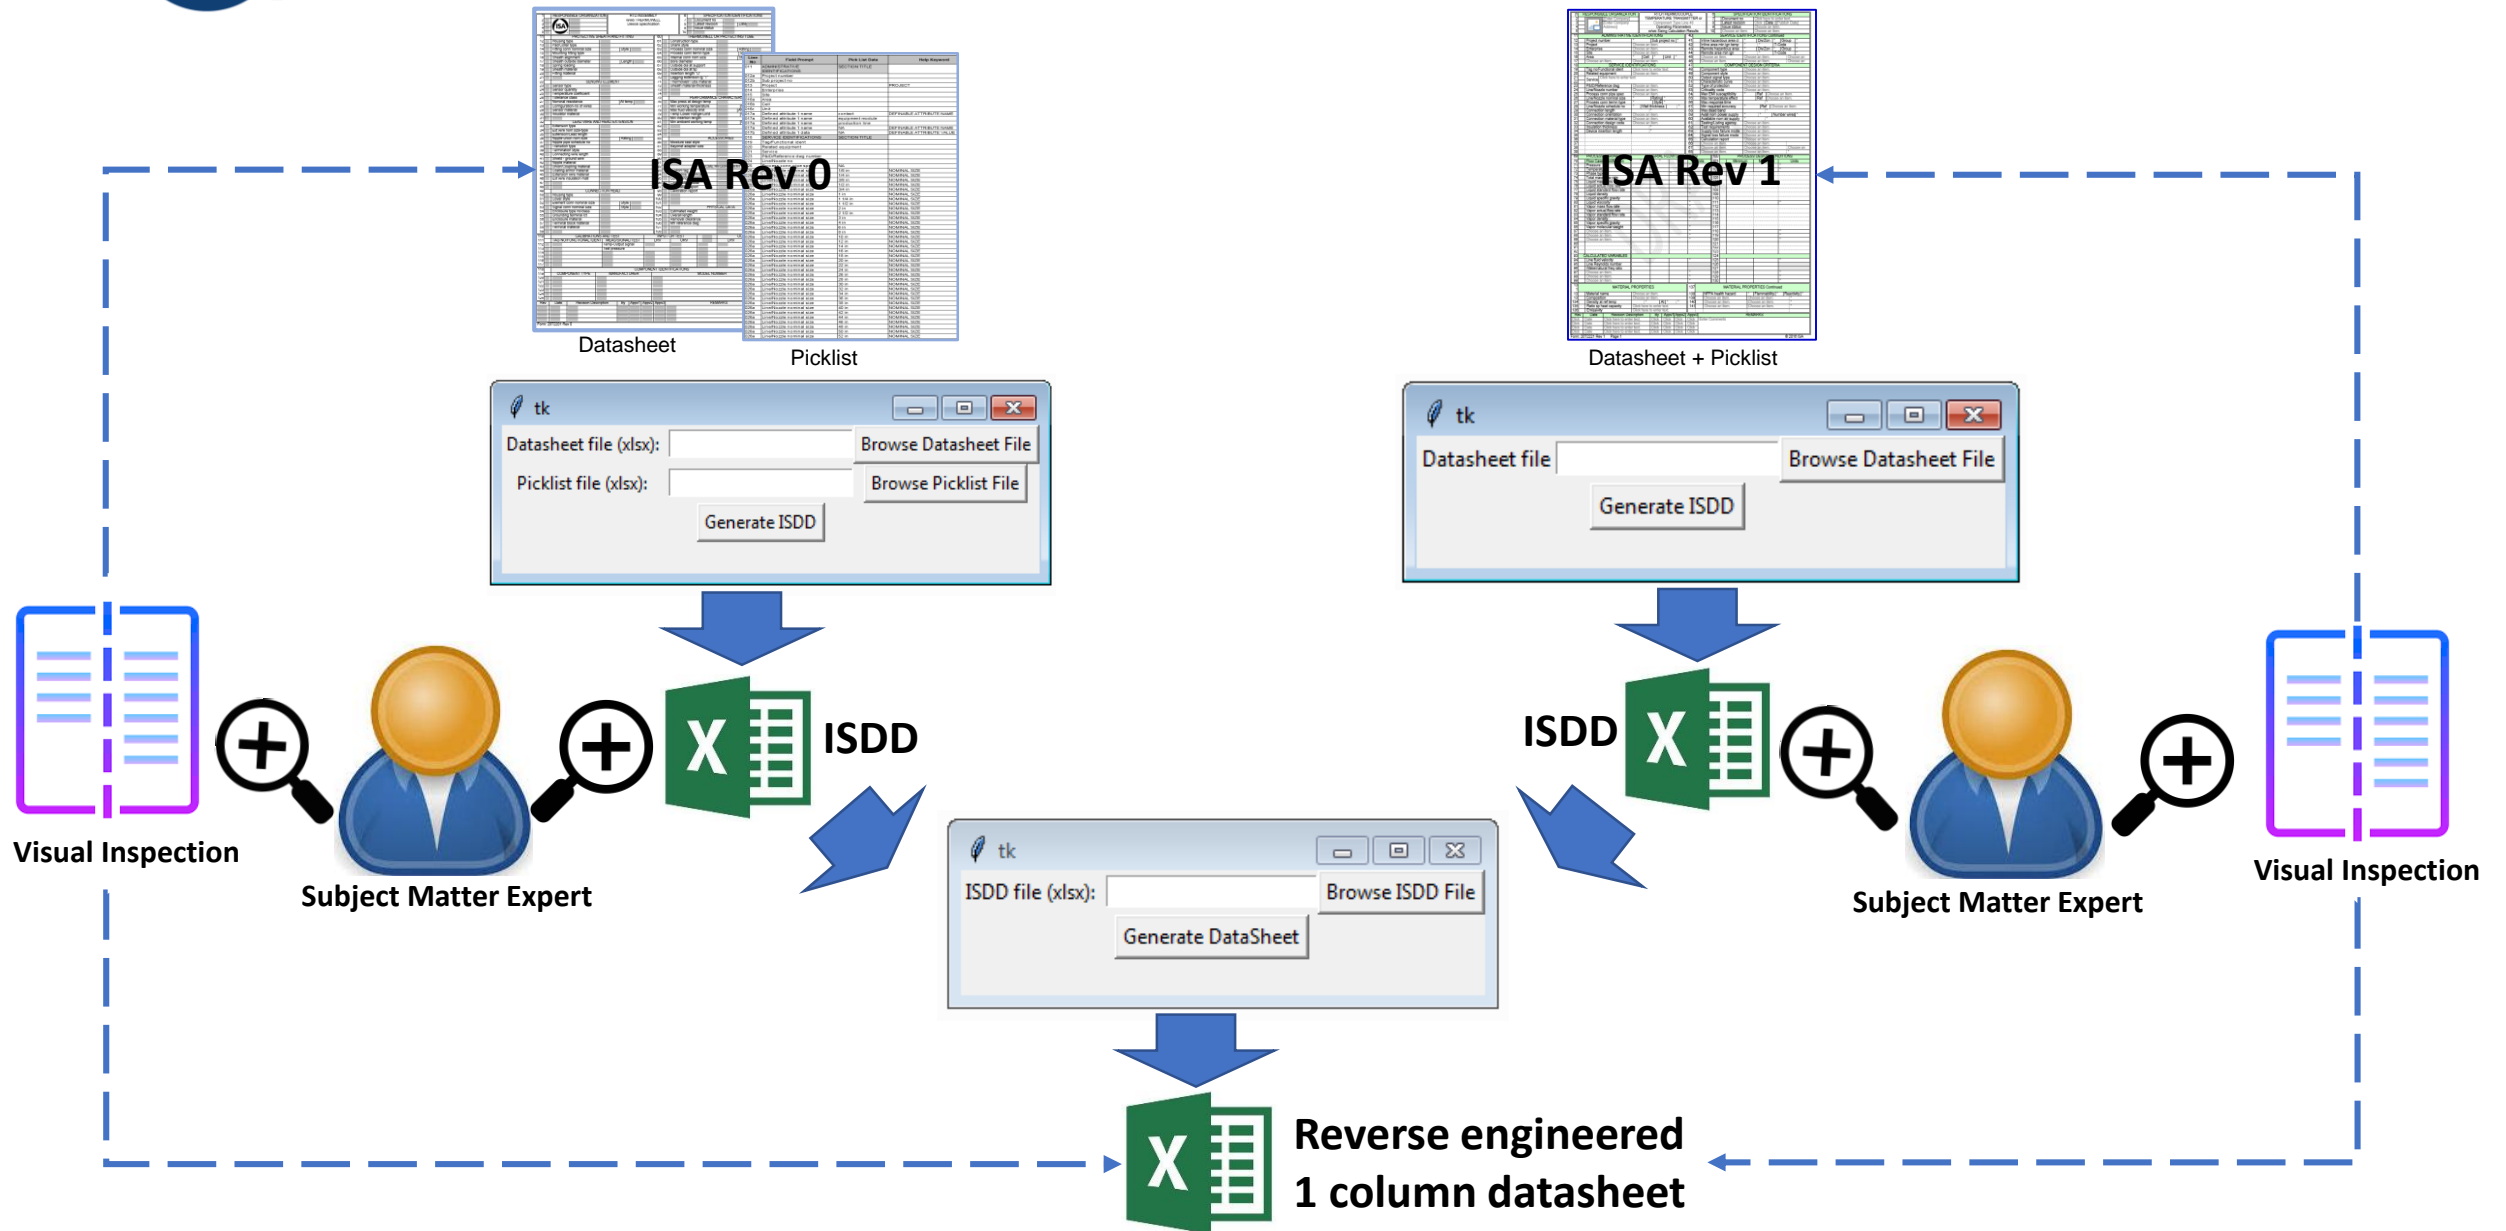

- ISO 15926 PCA RDL
- Energetics Unit of Measure
- MIMOSA CCOM Reference Data
- ISA 20 Picklists
- USPI CFIHOS RDL
- IEC Common Data Dictionary
- ECCMA Open Technical Dictionary

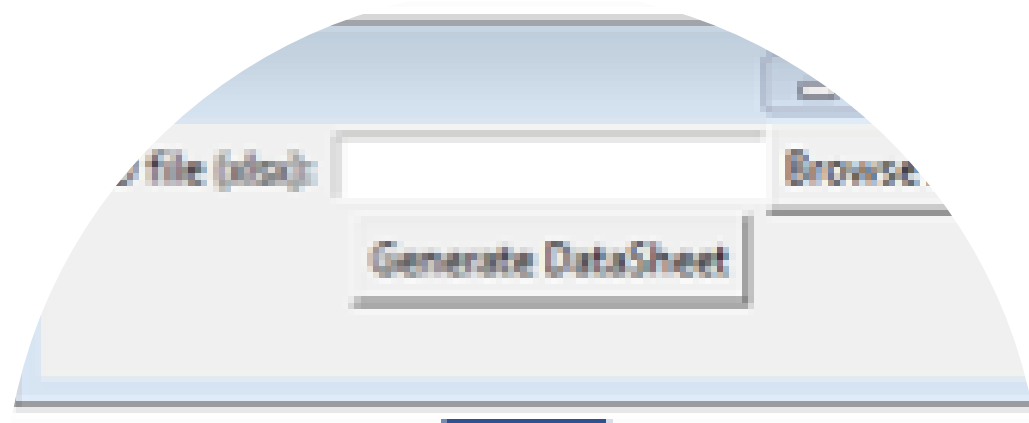

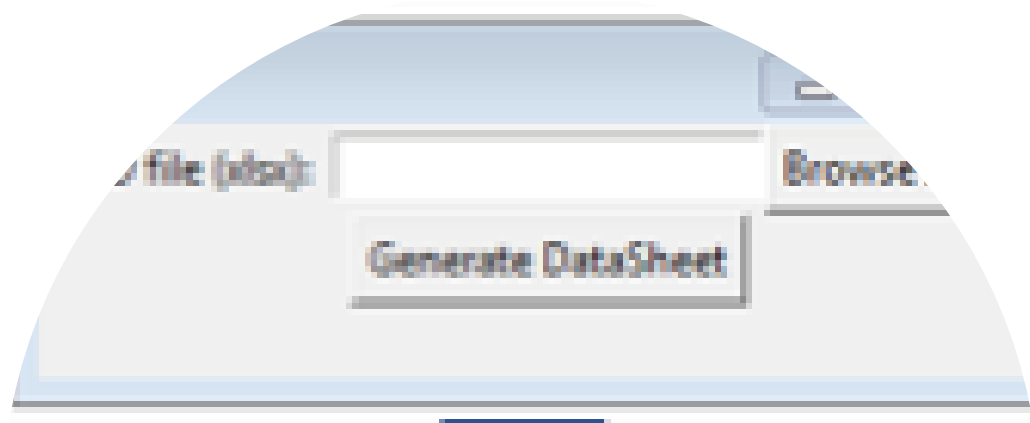

- MIMOSA Website

- XML
- Excel
- JSON (Work-in-progress)

ISDD Build Process Automation

Estimated ISDD Build Process Efforts

- Estimated level of effort per class for ISA and API ISDs
 - ISA-Build ISDDs - 3.5 Hours/Class, Versus
 - Manual-Build ISDDs - 3, 7 or 10 Days/Class/Sub-Class
- Estimated level of effort per class to “convert” CFIHOS classes
 - 2 Hours/class assuming CFIHOS logically correct and consistent
 - Automated conversion with manual QC review

Finish
